Executive Summary

This dataset contains 253,973 medical records with 9 features. The analysis provides insights into the distribution of medical products, manufacturers, and their characteristics.

Key Findings

- * The dataset includes a wide range of medical products with varying prices and pack sizes.

- * The majority of products are still in production, with a small percentage being discontinued.

- * The top manufacturers account for a significant portion of the products in the dataset.

****Recommendations****

- * Utilize the data to optimize inventory management and ensure availability of essential products.

- * Conduct further analysis to identify trends in product discontinuation and develop strategies to mitigate supply chain disruptions.

- * Explore collaborations with key manufacturers to secure competitive pricing and reliable supply.
