

# Healthcare Data Analysis Report

## Dataset Overview

Total Records	253973
Total Features	9
Numeric Features	2
Categorical Features	6

## Data Visualizations

## Key Insights

- Data analysis completed successfully

## Risk Factors

- Please review the data manually

## Recommendations

- Consider detailed analysis if needed

## Report Content

**\*\*Executive Summary\*\***

The dataset contains 253973 medical records with 9 features, providing insights into various aspects of medical products.

**\*\*Key Findings\*\***

- \* The dataset includes a wide range of products with varying prices, manufacturers, and pack sizes.

- \* The majority of products are still in production, with a small percentage discontinued.

- \* The most common product type is "Tablet," followed by "Capsule" and "Injection."

**\*\*Recommendations\*\***

- \* Utilize the data to optimize pricing strategies and identify potential cost savings.

- \* Monitor discontinued products to ensure availability of alternatives and prevent patient disruption.

- \* Analyze product composition to identify potential interactions and adverse effects.
