Medical Data Analysis Report

Executive Summary

The dataset contains 253973 medical records with 9 features, providing insights into the characteristics and availability of various medications.

Key Findings

* The dataset includes a wide range of medications, with varying prices and manufacturers.

* A significant number of medications are discontinued, indicating the need for monitoring and alternative options.

* The pack size and composition information can assist in optimizing medication administration and patient compliance.

Recommendations

* Conduct further analysis to identify trends in medication discontinuation and explore reasons behind it.

* Develop strategies to improve medication availability and ensure continuity of care for patients.

* Utilize the pack size and composition data to enhance medication management and patient education.
